

AMENDMENT

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claims 1 and 2 (previously cancelled)

3. (currently amended) A substantially dustless animal feed premix composition in solid noncompacted granular form and having a resistance to powdering, said composition comprising a physical admixture of granular fermentation solids comprising an antibiotic and oil in an amount ranging from 0.01 to 10% based on the weight of said animal feed supplement, said fermentation solids resulting from reduction of a fermentation broth including a fermentation medium in which an organism was cultured for producing the antibiotic, said fermentation solids having an antibiotic activity sufficient to ameliorate an antibacterial infection to treat an animal wherein the antibiotic activity is at least 10g/lb to 300 g/lb, and further comprising at least one potency standardizer selected from the group consisting of an edible feed material and a mineral product.

Claims 4-5 (previously canceled)

6. (previously amended) A composition according to claim 3, wherein said antibiotic is chlortetracycline.

7. (previously amended) A composition according to claim 3, wherein said antibiotic is oxytetracycline.

8. (previously canceled)

9. (previously amended) A composition according to claim 3, wherein said mineral product is limestone.

10. (original) A composition according to claim 9, wherein said edible feed material is rice hulls.

Claims 11-56 (previously canceled)

Claims 57-58 (currently canceled)

59. (previously amended) A particulate, substantially dustless noncompacted animal feed supplement comprising fermentation solids comprising an antibiotic product of a fermentation process, said fermentation solids resulting from reduction of a fermentation broth including a fermentation medium in which an organism was cultured for producing the antibiotic, said fermentation solids having an antibiotic activity sufficient to ameliorate an antibacterial infection to treat an animal wherein the antibiotic activity is at least 10 g/lb to 300 g/lb, said animal feed supplement prepared by blending fermentation solids with an edible feed material and a mineral product while spraying a non-toxic oil into said mixture during blending, wherein said non-toxic oil is added in an amount ranging from 0.001 to 11% based on the weight of said animal feed supplement into said material to produce a mixture thereof.

60. (previously canceled)

61. (previously amended) A particulate, substantially dustless noncompacted animal feed

supplement comprising fermentation solids comprising an antibiotic product of a fermentation process, said fermentation solids resulting from reduction of a fermentation broth including a fermentation medium in which an organism was cultured for producing the antibiotic, said fermentation solids having an antibiotic activity sufficient to ameliorate an antibacterial infection to treat an animal wherein the antibiotic activity is at least 10 g/lb to 300 g/lb, said animal feed supplement prepared by blending fermentation solids with an edible feed material and a mineral product into said material to produce a mixture thereof, wherein said antibiotic is selected from the group consisting of tetracycline, chlortetracycline, demeclocycline, oxytetracycline.

62. (previously presented) An animal feed supplement according to claim 61, wherein said antibiotic is chlortetracycline.

63. (previously presented) An animal feed supplement according to claim 61, wherein said antibiotic is oxytetracycline.

64. (previously amended) A particulate, substantially dustless noncompacted animal feed supplement comprising fermentation solids comprising an antibiotic product of a fermentation process, said fermentation solids resulting from reduction of a fermentation broth including a fermentation medium in which an organism was cultured for producing the antibiotic, said fermentation solids having an antibiotic activity sufficient to ameliorate an antibacterial infection to treat an animal wherein the antibiotic activity is at least 10 g/lb to 300 g/lb, said animal feed supplement prepared by blending fermentation solids with an edible feed material and a mineral product into said material to produce a mixture thereof, wherein said mineral product is limestone.

65. (previously presented) An animal feed supplement according to claim 64, wherein said

edible feed material is rice hulls.

Claims 66-79 (previously canceled)

80. (previously amended) A particulate, substantially dustless animal feed supplement comprising fermentation solids comprising an antibiotic product of a fermentation process, said animal feed supplement prepared by:

culturing an organism producing an antibiotic selected from the group consisting of chlortetracycline and oxytetracycline in a fermentation medium to produce a fermentation broth comprising said antibiotic;

adding an additional quantity of said antibiotic, said additional quantity of antibiotic being obtained from a fermentation broth, to the fermentation broth to increase the antibiotic activity of said fermentation broth;

reducing said fermentation broth to obtain fermentation solids comprising said antibiotic;

drying said fermentation solids to produce a solid having a low moisture content; and

granulating said dried solid to produce granules having a substantially uniform particle size, said granulated fermentation solids having an antibiotic activity sufficient to ameliorate an antibacterial infection to treat an animal wherein the antibiotic activity is at least 10g/lb to 300 g/lb.

81. (previously canceled)

82. (previously amended) A particulate, substantially dustless animal feed supplement comprising fermentation solids comprising an antibiotic product of a fermentation process, said animal feed supplement prepared by:

culturing an organism producing an antibiotic in a fermentation medium to produce a fermentation broth comprising said antibiotic;

adding an additional quantity of said antibiotic, said additional quantity of antibiotic being obtained from an fermentation broth, to the fermentation broth to increase the antibiotic activity of said fermentation broth, wherein said additional quantity of said antibiotic comprises a filtrate obtained from and acidified fermentation broth; reducing said fermentation broth to obtain fermentation solids comprising said antibiotic; drying said fermentation solids to produce a solid having a low moisture content; and granulating said dried solid to produce granules having a substantially uniform particle size, said granulated fermentation solids having an antibiotic activity sufficient to ameliorate an antibacterial infection to treat an animal wherein the antibiotic activity is at least 10g/lb to 300 g/lb, wherein said additional quantity of said antibiotic is selected from the group consisting of chlortetracycline and oxytetracycline.

83. (previously presented) An animal feed supplement according to claim 82, wherein said additional quantity of said antibiotic comprises chlortetracycline calcium complex.

84. (previously presented) An animal feed supplement according to claim 82, wherein said additional quantity of said antibiotic comprises oxytetracycline calcium complex.

Claims 85-103 (previously canceled)
